NORTH CENTRAL REGION
NATIONAL ANIMAL DISEASE CENTER
POST OFFICE Box 70
AMES, IOWA 50010

The National Animal Disease Center at Ames, Iowa, is the U.S. Department of Agriculture's research facility for the study of livestock diseases that occur in the United States.

The Center's goal is to provide knowledge and research data needed to diagnose, prevent, control, or eradicate domestic animal diseases that have national significance and/or cause serious economic loss.

The articles listed in this publication were prepared by members of the Center's Agricultural Research Service and Animal Plant Health Inspection Service scientific staff during calendar year 1974. The papers involve independent and interdisciplinary studies in the fields of bacteriology, biochemistry, biophysics, mycology, pathology, physiopathology, and virology. The list also contains a limited number of publications relating to experimental animal production, biological safety, and other support or service activities available within the NADC.

A handwritten signature in black ink, reading "Phillip A. O'Berry". The signature is written in a cursive style with a large, stylized 'P' and a long, sweeping underline.

P. A. O'Berry
Director
